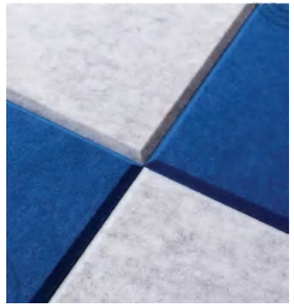
SOUND ABSORBING

Materials & construction

Egg crate acoustic foam
Egg crate foam provides strong noise reduction and is widely used for sound control in recording studios, vocal booths and control rooms.
The foam also assists with reverberation reduction and echo prevention for clear audio.

A sandwich element chassis
Acoustic sandwich elements are made from fire-safe materials including sheet metal, gypsum board, recycled acoustic foam and acoustic felt with excellent noise-insulating and noise-absorbing properties.

Acoustic absorption panel
Composed of compressed mineral wool or foam, sound absorbing acoustic panels absorb sound waves to reduce general noise, clarify speech and limit reverberation in walls within enclosed areas.



COMFORT

Built-in features targeted at user experience

Materials
Door: German doorware
Glass: 10mm saftey glass with aluminium frame
Floor: Anti-static and stain resistance low loop pile carpet

Features
Fans: Fitted with ventilation fans, controlled by a door triggered sensor

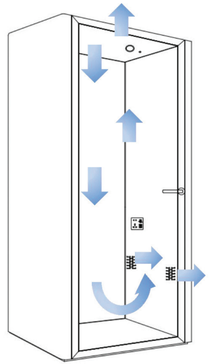
Productivity
The average distraction time is every 11 minutes, and 25% of lost time is due to distractions in or near work areas. Providing a place where people can escape visual and audio disruptions assists with increased concentration and productivity.

Ventilation fans
Filtering fresh air in from the outside helps circulate air through the pod, preventing users from breathing stuffy, less oxygenated air, and keeping the space fresh and inviting.

Ergonomic design
Ergonomic furniture design improves posture and alignment of the spine, it prevents arthritis and reduces the number of work related injuries.



storage fees, while providing a space for employees to take private phone calls and host meetings in an open office environment without the need to relocate to a larger office building.
